

Figure 1

Figure 1 shows a series of four graphs illustrating the relationship between the number of children per woman and the probability of having a child who is a girl. The x-axis represents the number of children per woman, ranging from 0 to 6. The y-axis represents the probability of having a child who is a girl, ranging from 0.5 to 1.0. The four graphs are labeled (a), (b), (c), and (d). Graph (a) shows a constant probability of 0.5. Graph (b) shows a decreasing probability as the number of children increases. Graph (c) shows an increasing probability as the number of children increases. Graph (d) shows a U-shaped curve.
